

SINGULARITY CATEGORIES AND VANISHING CYCLES

MASSIMO PIPPI - UNIVERSITÄT REGENSBURG

26th of April 2022

Abstract

I will explain some of the main ideas of non commutative algebraic geometry, for instance how one can pass from the commutative world to the non commutative one.

Then, I will discuss the example of a particular non commutative space, the singularity category of a scheme, and explain how its cohomology is related to the theory of vanishing cycles.
