

BIODIVERSITY MONITORING ON THE CAMPUS

For the coming summer-semester, the Student Council is looking for students, who are interested to volunteer as part of the "Initiative Nature Conservation & Sustainability".

Long-scale biodiversity monitoring is planned, to cover bird, insect and plant diversity which can be useful to detect trends in occurrence, distribution, or status of species.

You will be supported by experienced tutors who offer insights into the jungle of organisms.

What we wish from you:

- a passion for nature and biodiversity
- the ability to take a closer look
- a basic knowledge of the local flora and/or fauna
- the motivation to get involved in the scientific identification of plants and animals (also in self-study and with technical literature)
- the willingness to engage in a project over several months (vegetation period) and regularly.

If you are interested send an email to sprecher_innenrat@uni-regensburg.de or to greenoffice@ur.de.

One can only protect what one knows.
